Automotive After Sales Management - A Practical Guide to

Successful Workshop Parts & Service Operations Mohamad

Idrakisyah 2021-02-23 The after sales segment of the automotive

industry is gaining prominence over sales. The intensive competition

in sales of new cars has reduced profit margins, but on the other

hand, this is compensated from the higher profit margin derived from

the after sales business. The onus is on the automotive

manufacturers to heed to the new importance of the after sales

business in reacting to the changes and expectations of customers.

This book is written as a practical guide manual on matters relating to

the management of the after sales business. The objective is to bring

about improvements in all levels of the after sales operations in

workshops. The growth, profitability and sustainability of the after sales dealerships are possible when the business is managed in an effective and efficient manner. The chapters in the book covers all matters pertaining to the after sales operations, written in an easy-to-understand manner for practical and straightforward implementation across dealerships.

Radiation Hazard in Space L.I. Miroshnichenko 2013-04-17 The mono graph contains 8 chapters, and their contents cover all principal aspects of the problem: 1. Introduction and brief his tory ofthe radiation problem and background information ofradiation hazard in the near-Earth and interplanetary space. 2. General description of radiation conditions and main sources of charged partic1es in the Earth's environment and interplanetary space, effects of space environment on spacecraft. 3. Basic information about physical conditions in space and main sources of charged particles in the Earth's environment and interplanetary space, in the context of "Space W eather" monitoring and prediction. 4. Trapped radiation belts of the Earth (ERB): theory of their origin, spatial and temporal dynamics, and experimental and statistical models. 5. Galactic cosmic rays (GCR): variations of energetic, temporal and spatial characteristics, long-term modulation, and anomalous cosmic ray (ACR) component, modeling oftheir dynamics. 6. Production of energetic particles (SEPs) at/ne ar the Sun: available databases, acceleration, propagation, and prediction of individual SEP event, statistical models of solar cosmic rays (SCR). 7. Existing empirical techniques of estimating, prediction and modeling of radiation hazard, methodical approaches and constraints, some questions of changes in the Earth's radiation environment due to changes of the solar

activity level. 8. Unresolved problems of radiation hazard prediction and spacecraft protection, radiation experiments on board the spacecraft, estimating of radiation conditions during interplanetary missions. Space does not allow us to explain every time the solar-terrestrial and radiation physics nomenclature used in current English-language literature.
