Embodied Minds--technical Environments Thomas Hoff 2008 This book investigates how humans relate to technology in our modern society, and how our basic assumption of human thought and behavior guide our efforts to improve and control technology. This book shows how this dualism is evident and problematic in a wide range of areas, such as investigation of human error in accidents, case studies of innovative interface solutions, simulator training strategies, analysis of work practices in complex systems, and traffic safety research. This book is written for researchers, students and professionals, to supplement the ongoing effort to understand how technology can be integrated with more confidence in modern society.
