General and Oral Pathology for the Dental Hygienist Leslie DeLong 2013-02-25 General and Oral Pathology for the Dental Hygienist, 2nd Edition, is a comprehensive study of the general concepts of pathophysiology as they relate to systemic and oral conditions. The only dental hygiene book on the market to address both oral and general pathology, General and Oral Pathology for the Dental Hygienist is the ideal solution for programs that cover oral and general pathology in one course, and provides an easily accessible review of general pathology for programs that cover oral pathology separately. The Oral Pathology section is uniquely organized by distinct recognizable characteristics of lesions (for example, "white" lesions or "radiolucent" lesions), a uniquely practical and highly effective way of presenting this information since dental hygienists have to evaluate pathology based on what they see. This allows the student to easily identify what he or she might be looking at and to

differentiate between lesions with similar appearances.

Regression of Atherosclerotic Lesions M. Rene Malinow 2013-06-29 The Advanced Study Institute on Regression of Atherosclerotic Lesions, sponsored by the North Atlantic Treaty Organization, was held in Maratea, Italy, September 11-13, 1983. The institute was designed to foster discussion of experimental data on the regression of atherosclerosis in animals and evidence of a similar phenomenon in humans. The participating scientists showed with anatomical and biochemical data, that atherosclerosis regresses in cholesterol fed animals after withdrawal

of atherogenic stimuli. The existence of regression in humans was inferred from sequential angiographic visualization of arteries, but anatomical and biochemical characteristics of the process have not been defined. Two mechanisms are probably involved in such an angiographic regression. The first, which may occur when hyperlipidemia is partly or fully corrected or during undernutrition or other metabolic abnormalities, may be related to atherosclerosis changes noted in animals undergoing regression. The second type seems independent of changes in plasma lipid levels and may involve resolution of thrombi or other underlying arterial wall factors. The relative frequencies of the two mechanisms are unknown; whether they can occur simultaneously also warrants consideration. It is likely that an exciting milestone will be forthcoming when regression of atherosclerosis is unequivocally demonstrated in humans. Publication of these institute proceedings constitutes a valuable background for future developments.

The Cousins Rona Jaffe 2014-02-18 From the "master storyteller"* of The Best of Everything comes a wise and wonderful novel of family loyalties (and disloyalties). Olivia is a twice-divorced New Yorker from a large extended family who grew up together on a magnificent summer

estate, Mandelay. Although the cousins have scattered across the country, following sharply divergent paths, memories of their shared childhood continue to resonate, shaping their lives and decisions. Managing and Engineering in Complex Situations Samuel F. Kovacic 2013-02-15 With so many terms available to define the same thing, it would seem nearly irresponsible to introduce yet another term (complex situation) to describe a phenomenological state of such as a system. However, a complex situation infers both a broader meaning and imposes a different perspective. Complex in this context is dependent on understanding and reality rather than observer and knowledge. Situation imposes a gestalt that cannot be characterized within a singular perspective that relegates paradox to a superior/subordinate hierarchy. This also infers that complex situation has no monotonic definition or each definition is by default incomplete. Therefore the perennial derivations for systems such as complex systems, system of systems, federation of systems is no longer a sufficient descriptor for complex situation. Ergo system and its genealogy lack the constitution to define complex situations. The books' intent is to explore this pathology through a series of papers written by authors that work in complex situations and have dealt with the limitations

of the status quo: systems.
